Model 3040E Electric Shred Truck

The **Shredmore** Electric Shred Truck Model 3040E was developed for people who have owned conventional mobile shredders, have discerned their strengths but are frustrated by their limitations, and want to roll with significantly quieter, greener-running, and more fuel efficient technology. Unlike standard shred trucks, the all-electric **Shredmore** doesn't require a PTO, or 'power take off' drive shaft from the truck engine for operation of the shredder, and auxiliary equipment. With eco-friendly all-electric operation, the truck engine isn't used to run the shredder. As a result, the **Shredmore** gets better fuel economy, and the truck engine is spared the wear and tear of constant revving. Ease of maintenance and increased safety for service personnel is another benefit of this simple, innovative design. The **Shredmore** also features a self-contained "shredding pod" for unique portability. It can be utilized for 'plug & play' into existing electrical service for plant-based operation, reconfigured onto another chassis, or removed for fixed operation, as needed. The core component of the **Shredmore** is a custom single-shaft, low-speed Cresswood "Destroyer" Shredder, equipped with sizing screens for the reduction of documents to a predetermined, ultra-secure, and marketable particle size. In the final analysis, the **Shredmore** is the breakthrough Shred Truck that only an industry veteran can deliver for secure destruction professionals, and their clients!

Specifications

33,000 GVW (CDL)	Shredmore Model 3040E
Truck Horse Power	260
Engine, Diesel	International DT-466 High
Transmission	Allison automatic 5 speed
Transport Bin Capacity	2 - 95 Gallon Bins
Discharge Floor	UHMW Hallco walking floor
Shredder	40 Hp Cresswood HF-30
Generator	Isuzu
International Warranty	2 year unlimited milage
